

WHO IS PACO® ?

PACO® is a collaborative robot that assists painters in the **painting** of new builds and large renovation sites. It can **operate at heights of up to 3.5m**, runs on batteries and is **easy to clean and use**.

HOW DOES PACO® WORK ?

1. 3d scan

1- A digital model of the room or building is created using the supplied 3d scanner.

2. Programming

2- The operator programs PACO® and defines all the painting work to be carried out, the programming is easy.

3. Operations

3- PACO® carries out its operations autonomously. This allows the painter to perform other tasks in parallel.

Les Companions

Robots for painters!

PACO®

The robot for painters !

TEAM

A TEAM OF EXPERTS

Engineers, developers, designers, dedicated to creating robots that collaborate with and help painters.

OUR MISSION

A COLLABORATIVE TOOL

The combination of our robotic system and the expertise of the painters is the key to our new methodology.

PACO® streamlines work methods, ensures consistent quality, performs tedious and repetitive tasks and creates a safe and efficient working environment that enhances the knowledge of the people on site.

SUPPORTING YOU

The painting sector is ultra-competitive, and only the most efficient companies stand out in the long term. You are constantly challenged to balance speed, efficiency and profit margins whilst maintaining a safe working environment.

Our ambition? Providing you with concrete solutions on a daily basis for your working sites through technology.

SUSTAINABLE DEVELOPMENT OBJECTIVES

FOR TOMORROW'S WORLD

The construction industry must respond to an increasing demand despite a reduction of available manpower. Les Companions innovates to overcome the lack of qualified or trained personnel.

FOR OUR ENVIRONMENT

The world is challenged by the climate transition. PACO® helps you develop you business in a sustainable and environmentally friendly way.

FOR PEOPLE

Safety and comfort in the workplace are at the heart of our concerns. Our solution reduces the risk of accidents in the workplace and protects its users from repetitive strain injuries.

Robotics also allows you to train your teams in new, innovative and motivating tools that offer a new perspective to their careers.

Sustainable city

Decent work

Health

Innovation

Inequalities

Gender equality

Professional training

Eco-responsibility

VALUE PROPOSITION

+ PERFORMANCE

Robotics allows for repeatable and controlled productivity and production rates. In an ultra-competitive environment, PACO® gives you the means to differentiate yourself through innovation. The robot brings gains in productivity and efficiency. PACO® helps you reducing your costs and strengthen your margins.

+ QUALITY

PACO's behavior is mechanical and repeatable, ensuring a consistent and known level of quality. The system knows in advance the density of paint applied and can apply the equivalent of 2 coats in 1 pass. In addition, the robot is equipped with an airless spraying system which gives a very taut finish.

+ SAFETY

PACO® reduces health and safety risks in the workplace. The robot performs the tedious, repetitive and thankless tasks, while the painter does all the fine work and decision making. In addition, the system can operate at a height of 3.5m, to reduce the risk of falls.

+ SUSTAINABLE

Because Les Companions is committed to the world of tomorrow, we enforce quality and sustainable development. PACO® is compatible with "zero liquid discharge" cleaning systems.
